01. Introduction

The Huawei ICT Competition is an annual global event designed for students and teachers from colleges and universities. It offers an international platform for competition and exchange, enabling participants to strengthen their ICT knowledge, improve practical skills, and foster innovation using the latest technologies and platforms. Since its launch in 2015, the competition has been gaining significant momentum, with more countries and students joining each year.

The Innovation Competition focuses on evaluating participants' ability to apply AI and other ICTs to create innovative solutions. In accordance with the task requirements, participants need to use Huawei's AI technologies in combination with other technologies such as general AI, big data, cloud computing, mobile Internet, and IoT to develop solutions that address real-world needs.

02. Schedule

Registration	Preliminary	National Final	Region Final	Global Final
Aug – Dec 2026	Nov – Dec 2026	Jan 2027	Feb / Mar 2027	May 2027

03. Topic Description

Contact Us

Technology selection: Participants are required to use AI technologies and develop their entries based on Huawei Cloud services, while complying with local laws and regulations and selecting appropriate development tools and token providers for AI services. Entries should address real-world challenges in industry scenarios. Huawei encourages participants to integrate AI with other technologies, including big data, cloud computing, IoT, and VR/AR.

Resource support: The Huawei ICT Competition project team will provide the contact of each student team that has successfully registered and passed the review with Huawei resources, including Huawei Cloud vouchers, enablement courses, materials, and tools. Hardware devices are optional. If a project involves any hardware devices, the team must prepare them on their own. It is also allowed to use the hardware and software resources that belong to their colleges or universities.

Topic	Topic Requirements	Development Resources Provided by Huawei
Creating Innovative AI Applications Powered by Huawei Cloud	Application Domains •Entertainment/Office/Industry/Lifestyle apps, etc.	Cloud Service Resources •Huawei Cloud resources are provided to help teams deploy entries on the cloud and conduct online demonstrations.
	Presentation Format •Deploy the app on the cloud and showcase its core functions and interaction flow on a visual demo page.	Learning and Deployment Resources •Elastic Cloud Server (ECS): https://www.huaweicloud.com/intl/en-us/product/ecs.html

Introduction	Planning & Progress	Notifications	Guides	Awards	P
	Tool Requirements •All entries must be deployed on Huawei Cloud and use at least one Huawei Cloud service while complying with local laws and regulations. Available services include, but are not limited to, Elastic Cloud Server (ECS), Relational Database Service (RDS), and Distributed Cache Service (DCS) for Redis. Open Source Requirements •Entries shortlisted for the Regional Competition and Global Final must be open-sourced on communities like Gitee or GitHub. •Recommended open-source materials: project source code, dependency environment, deployment guide, user guide, open-source license, and demo screenshots or video links.		us/product/dcs.html •More products of Huawei Cloud: https://www.huaweicloud.com/intl/en-us/product/		

Please visit the Huawei ICT Competition 2026–2027 Innovation Competition Learning Space for development resources, learning materials, and more reference entries from previous competitions.

- 2. Regional Competition**
- Review form: presentation (15 minutes) and panel assessment (5 minutes)
 - Countries and regions will arrange and announce the order of panel assessment for participating teams.
- 3. Global Final**
- Review form: presentation (15 minutes) and panel assessment (5 minutes)
 - The presentation order for the on-site competition will be determined by drawing lots.
 - Each country or region may have at most one team per track for the Global Final.
- 4. Review Criteria and Required Materials**

Phase	Required Materials	Review Criteria
Preliminary & National	Submit the [Template 1] Word file, along with other relevant materials (e.g., PowerPoint file, design files, demo videos) if any. Materials must include but are not limited to: • The background and value of the solution, application scenarios, and actual problems addressed • Innovation highlights, e.g., AI application scenario innovation • Dataset selection and data processing • An explanation of key code snippets • The final achievements of the solution. Please provide quantifiable indicators to demonstrate the effectiveness of the solution.	1. Innovation (60%) AI application scenario innovation (discovering new scenarios or breakthroughs in traditional ones); differentiation from existing industry solutions; and more. 2. Application Value (40%) The solution accurately addresses real needs and solves corresponding problems. The solution demonstrates scalability and replicability for real-world deployment. The solution is technically complete, feasible, and ready for implementation.
Regional Competition	Submit the [Template 2] PowerPoint file, along with the visual demo page URL, complete application code, relevant datasets, a README file explaining reproduction steps (including deployment), and more. The committee will attempt to reproduce the results of the entry based on the submitted materials. If the verification result does not match the result specified in the submitted materials, the team will lose eligibility for advancement and awards. Submit a screenshot proving the entry has been open-sourced on a community (e.g., Gitee, GitHub).	1. Innovation (40%) AI application scenario innovation (discovering new scenarios or breakthroughs in traditional ones); differentiation from existing industry solutions; and more. 2. Application Value (35%) The solution accurately addresses real needs and solves corresponding problems; demonstrates scalability and replicability for real-world deployment; is technically complete, feasible, and ready for implementation; and demonstrates the validity and rigor of the presented result. 3. Completeness and Demonstrability (15%) The submission materials should be complete and logically structured, covering the project background, technical approach, dataset description, key code explanations, and performance verification. There must be an interactive demonstration of the entry. 4. Performance During Presentation and Panel Assessment (10%) The presentation is fluent and judges' questions are answered with clear viewpoints.
Global Final	Submit the [Template 2] PowerPoint file, along with the visual demo page URL, complete application code, relevant datasets, a README file explaining reproduction steps (including deployment) and more. The application and deployment progress of the solution should also be explained. The committee will attempt to reproduce the results of the entry based on the submitted materials. If the verification result does not match the result specified in the submitted materials, the team will lose eligibility for advancement and awards.	1. Innovation (40%) AI application scenario innovation (discovering new scenarios or breakthroughs in traditional ones); differentiation from existing industry solutions; and more. 2. Application Value (30%) The solution accurately addresses real needs and solves corresponding problems; demonstrates scalability and replicability for real-world deployment; is technically complete, feasible, and ready for implementation; and demonstrates the validity and rigor of the presented result. 3. Completeness and Demonstrability (15%) The submission materials should be complete and logically structured, covering the project background, technical approach, dataset description, key code explanations, and performance verification. There must be an interactive demonstration of the entry. 4. Application and Implementation Progress (10%) The solution is evaluated on its progress in commercial or non-profit applications, as well as community recognition (e.g., GitHub stars) gained after open-sourcing. 5. Performance During Presentation and Panel Assessment (5%) The presentation is fluent and judges' questions are answered with clear viewpoints.

05. Regional Final Award

Level	Awards	Number of Team Prizes	Prize*
Regional Final	Grand Prize	1	Prizes, Medals & Certificates will be awarded at Regional Competition
	First Prize	1	
	Second Prize	2	
	Third Prize	3	

*Note: The Organizing Committee may adjust prizes and quotas as needed based on the total number of participants and the quality of entries received.

college/university. It is encouraged to clearly specify duties between team members and build a team of students from different grades to gather complementary skills and maximize their ability to innovate.

- Each contestant can participate in only one track. (For example, those who participate in the Practice Competition must not attend the Innovation Competition, and vice versa.) Those whose projects pass the selection process will advance to the competition. It is not allowed to change the students of a team after successful registration.
- To keep the competition fair and orderly, each participant must not register in multiple regions or countries. Duplicate registrations will unfortunately result in the cancellation of competition results and future participation.
- Teams that fail to submit the required materials in the system by the specified deadline of each stage will be considered as having withdrawn from the competition.
- Teams whose submitted code and related materials fail to demonstrate the presentation results upon review will be disqualified.
- Participants must use the Huawei technologies specified in the competition requirements. Entries that do not use the required Huawei technologies will not be eligible for the competition.
- Entries must be able to solve specific issues in real-life scenarios or in a certain industry, which can be a software system or a "software + hardware" platform featuring device-pipe-cloud synergy. They need to be innovative, practical, and originally designed by teams. Teams need to ensure that finalized entries are fully functional with no glaring issues or deficiencies, and that logic and operation are both smooth.
- Teams must specify the Huawei technologies they use in their entries, by highlighting the technologies either in the solution architecture diagram or in the process flow diagram or relevant codes. It is advised that a finalized entry describes the design scheme, functions, value, and issues it is designed to resolve.
- All designs must not violate national laws and regulations, nor contain discriminatory content relating to gender, nationality, and religion, nor infringe on the privacy of others.
- It is prohibited to directly use previous entries of other contests or competitions without making any improvements. Otherwise, the team will be disqualified.

2. Intellectual Property Rights

- All designs shall not infringe any copyright, trademark, or other rights of a third party. All the consequences of plagiarism shall be borne by the contestants themselves.
- All inventions, patented technologies, and resources involved must have clear and legal intellectual property rights or ownership. The contestants agree to provide their designs free of charge and grant the Organizing Committee the following rights, without limitation: reproduction, distribution (paper and digital), exhibition, teaching and training, showing, and online dissemination of their designs.

* The Huawei ICT Competition Organizing Committee reserves the right to interpret the rules of the Innovation Competition.
